10. Frequently asked questions

1. About the website and its structure

The Tandara Family Digital Archive is a family genealogy website covering the Tandara surname's genealogy, origins, migrations and other points of interest, organised by family branch. The website is available in Croatian and English; change language using the flag link in the page header.

The genealogy divides the family into four main branches, each named after its founding ancestor and his wife:

Branch	Name	Founding couple
First	Jure's branch (Jurina grana)	Jure and Matija, née Lekić
Second	Petar's branch (Petrova grana)	Petar and Jela, née Budić
Third	Ante's branch (Antina grana)	Ante and Matija, née Brnas
Fourth	Mate's branch (Matina grana)	Mate and Filipa, née Kopač

All four branches descend from the common ancestor **Ivan Tandara (born around 1695)**. There is also a fifth, separate section - the Tandaras of Livno (Livanjske Tandare, the Filip branch) - shown under its own heading below the family tree on the home page.

2. Navigating the website - main menu

The main menu at the top of each page contains the following sections:

Menu item	What it contains
About the Author and Project	Information about the author and the creation of the archive
Origin of the Surname	The origins of the Tandara surname and family
Family Genealogy	An overview of the family tree, how to read it and links to all branches
Migration and Distribution	The family's history of migration and dispersal
Interesting Facts	Stories and facts about the family
Contact and Collaboration	Contact form for questions, additions and private-archive access requests
Visitor Messages	Visitor messages published with permission
Privacy Policy	Full rules on collecting, publishing and protecting data

3. Family branches and interactive diagrams - how to recognise them

Important: diagrams are never identified to visitors by technical names such as box1 or box2a. Those names appear only in background page URLs and need not be used. The visible page headings are authoritative.

On the home page, the family-tree image has four boxes on the left labelled Jure's, Petar's, Ante's and Mate's branches. Click any of them to open the corresponding branch page.

Along the right edge of the same image, separate boxes arranged from top to bottom show the founders of the four branches and their wives. Each box is headed by the branch number:

Heading above box	Contents of box
first branch	Jure and Matija, née Lekić
second branch	Petar and Jela, née Budić
third branch	Ante and Matija, née Brnas
fourth branch	Mate and Filipa, née Kopač

Above those four boxes, under the heading first ancestor, is the common ancestor of all four branches: **Ivan Tandara (born around 1695)**. Below the entire tree image, a separate heading, **TANDARAS OF LIVNO**, opens that family section.

Clicking either a branch-name box on the left or a founder-and-wife box on the right opens the corresponding branch page. Each of the four branch pages is headed with its branch number (for example, FIRST BRANCH OF THE FIRST TANDARA FAMILY) and has an Open diagram button near the bottom leading to that branch's interactive family-tree diagram.

Heading on branch page	Branch
FIRST BRANCH OF THE FIRST TANDARA FAMILY	Jure's branch
SECOND BRANCH OF THE FIRST TANDARA FAMILY	Petar's branch
THIRD BRANCH OF THE FIRST TANDARA FAMILY	Ante's branch
FOURTH BRANCH OF THE FIRST TANDARA FAMILY	Mate's branch

In an interactive diagram, clicking a person opens a side panel with available details: birth and death years, parents, spouse and children. For a protected person, the label Living descendant appears instead of the name, with a note that the name is available only on the private website. The genealogical code (for example, **2.2.1.1.1.2-S1**) remains visible to preserve the person's place in the tree.

How to find a specific person

Many names recur over generations in the Tandara family - sometimes even the same combination of a person's name and their father's name. A person's first name alone therefore often does not identify them unambiguously. Use either of these approaches:

- **Genealogical code** (for example, 2.2.3.1.1.3.1): each person has a unique code locating them in the tree. If you know it, this is the most reliable method.
- **Person's name + father's name + mother's name**: adding the father's name may still produce several possibilities, because names repeat in different branches and generations. Adding the mother's name almost always narrows the result to the person sought.

Family nicknames by branch

Some family lines within the main branches are also known by inherited nicknames:

Branch	Families / nicknames
Petar's branch	Dr Ante Bruno Tandara's family, Tromići, Lovrići
Ante's branch	Lovrinovići, Križanovići, Đulkići (nickname Đulko), Tucići, Pikići, Rumići
Mate's branch	Cesarovići
Tandaras of Livno	Also includes Tandara lines from Sisak and Berlin

4. Public and protected (private) genealogical data

The distinction between public and protected data is based on confirmed death, not solely on year of birth:

- **Public**: data on family members confirmed to have died, regardless of year of birth; data on those born in 1930 or earlier who can reasonably be considered deceased in view of their age and family context; and data on people whose year of birth is unknown when their parents, siblings, spouse or children reliably place them in an older, deceased generation.
- **Protected** (name hidden, code visible): names, years of birth, place of residence and family details of living people, and of people born after 1930 for whom no year of death has been entered or confirmed.

A note on names that can be found elsewhere online: although this website does not show the names of living people born after 1930 for privacy reasons, that does not mean those names are otherwise unknown or unavailable. Many people have their own public online or social-media profiles, or their names can be found through public profiles of close

family members. A web or social-platform search can often establish their identity. Hiding names on this website is therefore a precaution and a sign of respect for privacy within the archive, not a guarantee of absolute anonymity elsewhere.

Photographs of protected people already published in publicly available online interviews may remain publicly visible in a neutral context, without names or genealogical links, alongside a clear privacy notice (the Publicly Published Photographs page).

Clicking a protected record or padlock icon opens a pop-up explanation and a Send access request button, which leads to the contact form.

Examples: searching for a specific person

These examples supplement How to find a specific person. A genealogical code is the most reliable search key. If you do not know it, combine the person's name with both parents' names.

Example 1 - Dr Ante Bruno Tandara (Ante Bruno Matin)

Search method	What to enter
Genealogical code	2.2.3.1.1.3.1
Person's and parents' names	Person: Ante Bruno Father: Mate Mother: Mara

Expected result: Dr Ante Bruno Tandara (1937-1989), identified in the genealogy as Ante Bruno Matin. His father is Mate Antin and his mother is Mara, née Knežević.

Example 2 - Tomislava Tandara, Bruno's daughter

Search method	What to enter
Genealogical code	2.2.3.1.1.3.1-K2
Person's and parents' names	Person: Tomislava Father: Ante Bruno Mother: Vanja

Expected result: Tomislava Tandara, daughter of Dr Ante Bruno Tandara and Vanja, née Brkljača. Her genealogical code is 2.2.3.1.1.3.1-K2.

Note: a person's first name alone is often insufficient because names recur over several generations. Adding both parents' names narrows the result. Where known, the genealogical code remains the most precise search key.

5. How to request access to the private archive

Family members and others who can demonstrate a legitimate connection to the Tandara family may request access. The procedure is:

- 1. Open Contact and Collaboration and scroll to the Contact Form section.
- 2. In the Enquiry type drop-down, select Request for access to the private archive. The form then also asks for someone who can confirm your identity.
- 3. Complete the required fields:

Field	Note
Full name	Required
Town/city and country	Required
Reply e-mail address	Required; the response and, if approved, access link are sent here
Family branch	Select it if known: Jure's, Petar's, Ante's, Mate's or Unknown
Person who can confirm identity or family relationship	Required for a private-archive access request

Field	Note
Connection to the Tandara family	Required; for example, I have the Tandara surname, I am a descendant, or I am researching the family
Message	Required; also describe your branch, relationship to the person or branch, and reason for requesting access
Permission to publish the message	You must select Yes or No
Permission to publish name and town/city	You must select Yes or No
Privacy rules consent	You must tick the consent box

- **4.** Submit the form. It will not send until all required fields are completed correctly. A receipt confirmation appears after successful submission.

Important: do not send a copy of an identity document by ordinary e-mail without first arranging this with the archive administrator. Usually, viewing a document is sufficient; a permanent copy need not be stored. A known family member may also confirm identity and family connection.

6. What happens after you submit a request

The system first checks the e-mail address you entered:

- If the address has already been permanently approved, you receive a link to enter the private archive immediately.
- If the address is new and unknown to the system, the request goes to the archive owner/administrator for review and initial approval.

The archive's author and administrator decides whether to approve access and reserves the right to reject a request, limit the scope of access or later revoke access in order to protect family members' privacy.

7. Entering the private archive after approval

An approved user receives personal access to the private archive, which is hosted separately. After approval, an access link is sent by e-mail. Open it on the device you will regularly use and follow the steps to complete sign-in. You can subsequently enter the private archive in the same way, without completing the request form again.

8. Rules for using approved access

- Approved access is intended solely for the user to whom it was granted.
- Do not lend your account or the device on which sign-in is registered to anyone else for access.
- Do not copy, publicly publish, forward or use protected data for another purpose.
- The administrator may revoke access at any time to protect family members' privacy.

9. Privacy Policy in full (point-by-point summary)

Based on the Privacy Policy page, last updated 25 August 2026.

1. Purpose of the website. The website preserves information about the Tandara family's origins, genealogy, migrations, history and memories.

2. Information you may submit voluntarily. Through the contact form you may voluntarily send your full name, town/city, country, e-mail address, connection to the Tandara family, message, photographs, documents or other information you choose to share.

3. How information is used. Information is used only to respond to enquiries, add to the family archive, check genealogical information, handle suggestions and support possible collaboration on website content. It is not sold, rented

or used for spam.

4. Public and private genealogical data. See section 4 of this guide. Access to protected data requires valid prior approval from the administrator of the separate private archive; confirming an e-mail address alone does not grant access. Every request is checked and approved manually. If you believe information is inaccurate or outdated, or do not want it published, you may request correction, concealment or removal.

5. Contact form and FormSubmit. The contact form uses FormSubmit to deliver messages to the website author's e-mail address. Basic anti-spam measures include CAPTCHA, a hidden honeypot field and blacklist protection.

6. Visit statistics. Public pages use FlagCounter for aggregate visits by country, and some public pages also use Umami for aggregate visit statistics. Genealogical information is not sent to these services as analytics content. The separate private family archive does not use them to profile users; its access rules are separate and limited to necessary sign-in and approval checks.

7. Interactive maps and external sources. Migration pages use the Leaflet library from unpkg.com and OpenStreetMap map tiles from tile.openstreetmap.org. A no-referrer rule applies to those requests, so the address of the current page is not sent to the external services. These data are not used to create personal profiles or connected to genealogical records.

8. Cookies and private access. The private portal uses no analytics cookies - only a necessary security session for sign-in, approval checking and protection of private content.

9. Separate hosting for the private portal. The private portal is separate from the public website and hosted on Cloudflare infrastructure. In delivering and protecting the site, Cloudflare may process necessary technical data such as IP address, access time and browser data. Private content and protected persons' data are not published in the public repository.

10. Security measures. The website uses a Content Security Policy (CSP), limits content sources, protects against mixed content and blocks unsafe embedded objects. Embedded interactive content has additional iframe restrictions. The site itself does not request camera, microphone, location, payment or USB access.

11. Your rights. You may request information concerning you, correction of inaccurate data, data removal, restriction of publication or withdrawal of previously given publication consent.

12. Contact. For privacy questions and correction or removal requests, use the Contact and Collaboration page.

13. Policy changes. The policy may be updated to improve security, reflect site content or changes in external services. Last updated: 25 August 2026.

10. Frequently asked questions

Why does a diagram URL contain box2a when the page says First Branch?

box2a is only a technical background filename. Visitors do not need to use or remember it. The page heading (for example, FIRST BRANCH OF THE FIRST TANDARA FAMILY) and the branch name (Jure's, Petar's, Ante's or Mate's) are what matter.

I see only a person's code, such as 2.2.1.1.1.2-S1, rather than a name. What does that mean?

The person is still living or their year of death has not been confirmed, so their name is protected under section 4 of the Privacy Policy. The code remains visible to preserve their position in the family tree.

I do not know which branch I belong to. Can I still request access?

Yes. Select Unknown in the Family branch menu, then describe what you know about your family in your message. The administrator can help identify the branch.

How long does approval take?

It depends on the time the administrator needs to verify identity and the family connection. If your address was previously approved, access is almost immediate.

Where can I read the full privacy rules?

Open Privacy Policy in the main menu. A point-by-point summary is also in section 9 of this guide.

These instructions concern the Tandara Family Digital Archive. For questions not covered here, please use the Contact and Collaboration page.
